COLOUR SCHEME

The colour schemes and colour details include, a space type theme, complemented by a dark blue and a light colour scheme to match the templates and examples.
I have chosen this colour scheme because it complements my style, and choice of theme, I like to do space as a topic and so I chose it.

The home page's colour scheme is matching the light and space theme,so dark colours have been used with a mixture inside a white background and images to show the theme concept.
The about page is very similar and uses the same concept and colour scheme as the first and the others follow through with this, this shows that I have kept consistancy and I l prefer it like this because it is simple and very easy on the eyes. It matches the theme I am aiming for which is space and I think consistency is key, why I aimed for this.

JUSTIFICATION

My website if compared to is similar to the simplistic space theme as for NASA on their website, I have done it this way because I like how the way NASA have done it and it also suits my purpose, as I like the theme revolving around space so I decided to pick up the topic on that in specifictalking about black holes in the universe, where as NASA talks about all of space in general, mine only

gives nformation on certain key points to do with space.

EVALUATION

- The way I have implemented this design on my website by looking at other websites such as NASA's and then decided to build mine from start up and implement it in a similar ay with the theme and style.

- I have done it this way because it the theme stands out to me, and space is my key favourite area and I really like working on it and bulding upon it whilst creating a website for it, so I went with this mainly because it is a good area for me to create a website on, and I had a lot of knowledge in this area so I knew the theme styles to go with along with how to build a good layout for it.

- My designed has changed since the concept, for example I had to link every webpage together, in my original design it wasn't all linked but I decided to do this and also my theme style from mostly dark to a 45/55 dark and light, as it was mostly dark and it needed balancing so these are the changes I made in total.

TESTING

The way I have tested my website, is by creating each page and items on the webpage, and testing as I went along to check if they appeared ad the links worked as I was creating the website.

I did it this way because it would help me catch problems along the way as well as, make and build my website allowing me to check propery as I go along, rather than create it and at the end it would be difficult for me to pinpoint the exact problem if I had encountered it inside the webpages, hence saving time and being more efficient in creating the website.
